Additional information **Prizes and reviews:**

These two books are obviously educational, but it was their careful design and artistic quality which caught our attention. This is more than just a simple method for learning English, since the books also contribute to the readers' artistic education. The illustration style goes beyond the aesthetic and functional conventions which we are so used to seeing in this kind of projects. The printing and presentation of both books is of the highest quality due to the graphic design and printing methods. The material used is very resistant and perfectly adapted to the age these books are designed for (0-6 years). Revista Babar (10/26/2009)
